PROGRESS REPORT

In this period, Metro Plastic Industries has plans to increase their production capacity by importing a new HDPE Extrusion line from China enabling an increase of production of HDPE Pipes and expanding the size varieties of HDPE Pipes upto 250mm. (Currently had been manufacturing HDPE Pipes from 25mm – 140mm).

We in recent times have achieved record production and sales and now serving in Government Projects, Private Contractors and exporting to neighboring countries.

In order to increase the quality, we have also established a quality control department at the plant and have registered with the TBS for UPVC and HDPE Pipes which can contribute largely to infrastructure development of the country.

Grand Total		1,017,344	1,017,344

2. Project Financing

Metro Plastic is being supported by Habib African Bank which has provided us with an Overdraft limit / Local Loan thru which our expansions in plant are being made possible.

	Amount (USD)
Local equity	181,211
Local loans	836,133
Total Investment	1,017,344

3. Problems and Solutions

The current situation of the country is very promising due to a lot of development projects being done. However, one of the main issue which we at Metro Plastic Industries face is the power interruption without notice. This leads us in halt of production and unwanted wastage. During this time of rapid development of the economy, we expect the government to look into this uninformed power interruption so that industries could focus more on the production level and meet the demand of the economy.

Another main problem is the expertise which is not available in the country. Due to that reason, we are calling expertise to work with us from different part of the world specially India and Pakistan nationalities as this is their forte and they are good at it. However, on certain moments their permits are rejected and delayed due to which calling expertise

from abroad becomes an issue. The management however is focusing more on training of local staff by the foreign expertise so that dependencies on foreign expats could be reduced and more work could be done by the local employees.

7. Future Plans

Metro Plastic Industries have recently entered into government projects serving projects all over Tanzania funded by the Government of Tanzania thru TANEPS Portal. With this successful supplies, we have now introduced HDPE Pipes of Size Range upto 250mm which only a very few companies in Tanzania are equipped with that facility.

Apart from that, we also plan to produce PVC Flooring/PVC ceiling for which market research is being done. We plan to reduce the importation dependencies of building material and increase local purchases contributing positively in the economy.

Additionally, for this purpose of increasing production level, we have plans to expand and grow setting up another plant in the city of Kibaha where our production level will increase by almost double and shall increase our product range even further.
