Definitions

An explanation of terms shown in the tables above

Book cost for long positions is the total amount paid to purchase a security including any transaction charges related to the purchase, adjusted for reinvested distributions, return of capital and corporate actions.

Book cost for short positions is the total amount received for the security, net of any transaction charges related to the sale, adjusted for any distribution (other than dividends), returns of capital and corporate actions.

Market value is the price of the security or fund multiplied by the quantity held.

Unrealized Gain or Loss is the gain or loss that would be incurred, if your holdings were liquidated as at the end of the statement period. It is calculated by subtracting book cost from market value.

This will impact most trades in securities. The change is expected to take effect Monday, May 27 for Canadian capital markets and Tuesday, May 28 for U.S. capital markets. Once implemented, your trades in Canadian and U.S. markets will settle one business day sooner.
