The Executive Director
Tanzania Investment Centre (TIC)
Shaaban Robert Street / Garden Avenue
P.O. Box 938,
Dar es Salaam, Tanzania

Dear Sir/Madam,

RE: APPLICATION FOR CERTIFICATE OF INCENTIVES – RENEWABLE ENERGY SYSTEMS AND SOLUTIONS INVESTMENT PROJECT

Please refer to the heading above.

We are honored to submit this formal application for TIC registration and to request the issuance of a Certificate of Incentives for our Renewable Energy Systems and Solutions Investment Project with Project Code (TIC2025-782795).

GreenLeaf Technology Solutions is proposing a comprehensive renewable energy initiative that involves the supply and installation of 2,792 Solar Home Systems across 16 island communities in the Lindi and Coastal regions. This project, secured under a REA contract valued at TZS 1,824,560,287, aligns with our vision to enhance rural electrification in Tanzania and promote sustainable renewable energy development nationwide.

As a 100% Tanzanian company with over 13 years of proven experience, we have the capability to execute this project successfully. We have secured financing from various sources, including a TIB loan facility (TZS 818M), an REA advance payment (TZS 247M), and company equity (TZS 500M), which reflects our financial strength and commitment. We

are ready to initiate implementation immediately upon receiving TIC certification, with a goal of completing the project within 24 months. We have already placed our first order and made a 40% advance payment.

This initiative will provide substantial national benefits, including direct electrification for 2,792 households in underserved communities, the creation of 45 permanent jobs and over 120 indirect positions, technology transfer, local capacity building, and advancement of Tanzania's rural electrification and climate goals. The social impacts will enhance health and education outcomes while fostering small businesses and income-generating activities.

The TIC Certificate of Incentives is crucial for the success of this project and future sustainability of the project during this initial stages of the project; as it will facilitate cost optimization through duty relief and VAT exemptions, operational efficiency through one-stop services, and protection under the Tanzania Investment Act. These incentives will allow us to offer competitive pricing and reinvest in expanding renewable energy access across Tanzania.

We have invested more than TZS 300 million in previous project developments, which include land acquisition, solar and wind mini-grid development (with Kilwa Kisiwani now operational), professional registrations, technical assessments, and initial procurement commitments. Our comprehensive documentation package includes all required certificates, business plans, financial records, and technical specifications.

We respectfully request expedited consideration of this application to facilitate immediate project commencement and maximize our contribution to Tanzania's renewable energy development.

Thank you for your consideration.

Yours faithfully,

Managing Director

Conrad Mwendaiye Katakweba
