

SUMMARY OF PROGRESS REPORT

1. The area of the leased land from Mkomazi village is exactly (6,644) acres out of (20,444) acres of village land, (according to the land use plan) that was drafted and certified by all concerned authorities.
2. We construct about 2000 square meters of building for office, storage and residence for administrative staff.
3. We have around 27 local workers on our payroll.
4. A total of (3,500) acre of forest land has been cleared to start our sesame project, which was not successful because of boreholes salty water.
5. Then we tried to grow sunflower which was very successful but we had a big challenge. 1200 acres of sunflower seeds had been eaten by birds.
6. Then we decided to do Sisal because we already invested a huge amount of money and infrastructure (about US\$ 5 million).
7. Nowadays, we have around 2500 acres of sisal and we expect to start harvesting Jan 2026.
