Introduction

Chhabhadiya group of companies was established on 9th August 2017 with the objective of being the centre quarry, mines, Transportation, Road Construction business along with other related fields.

We would like to emphasize quarry, mines & Road Construction in terms of increasing their productivities and competition by specialized technical, related fields of engineering with personnel from engineering, technician, trained staff from department of primary industry and as well as experience direct employees.

The company aims to move to a service task in business of mining, quarry, transportation, Road construction deliveries and a one stop service with a focus on security and correctness in engineering concepts with safety as a core.

Objectives

- To be one of the leading quarry/mines producing company in East Africa.
 - Provide better and quality services to our clients.
 - Provide employment opportunities to especially to the surrounding community.
 - Foster development by supporting the community. Conserve the environment
-

Mission & Vision

To provide products of the finest quality and services of the highest standard to customers in a safe and efficient manner whilst maintaining corporate integrity and profitability.

To maintain and build on our position as the leading quarry operator in East Africa and as act as a leader in sustainability in our industry.

Goals & Values

Through direct operations of the company, the organization shall.

Create employment to the citizens especially the surrounding community.

Contribute to the economic growth through payment of taxes.

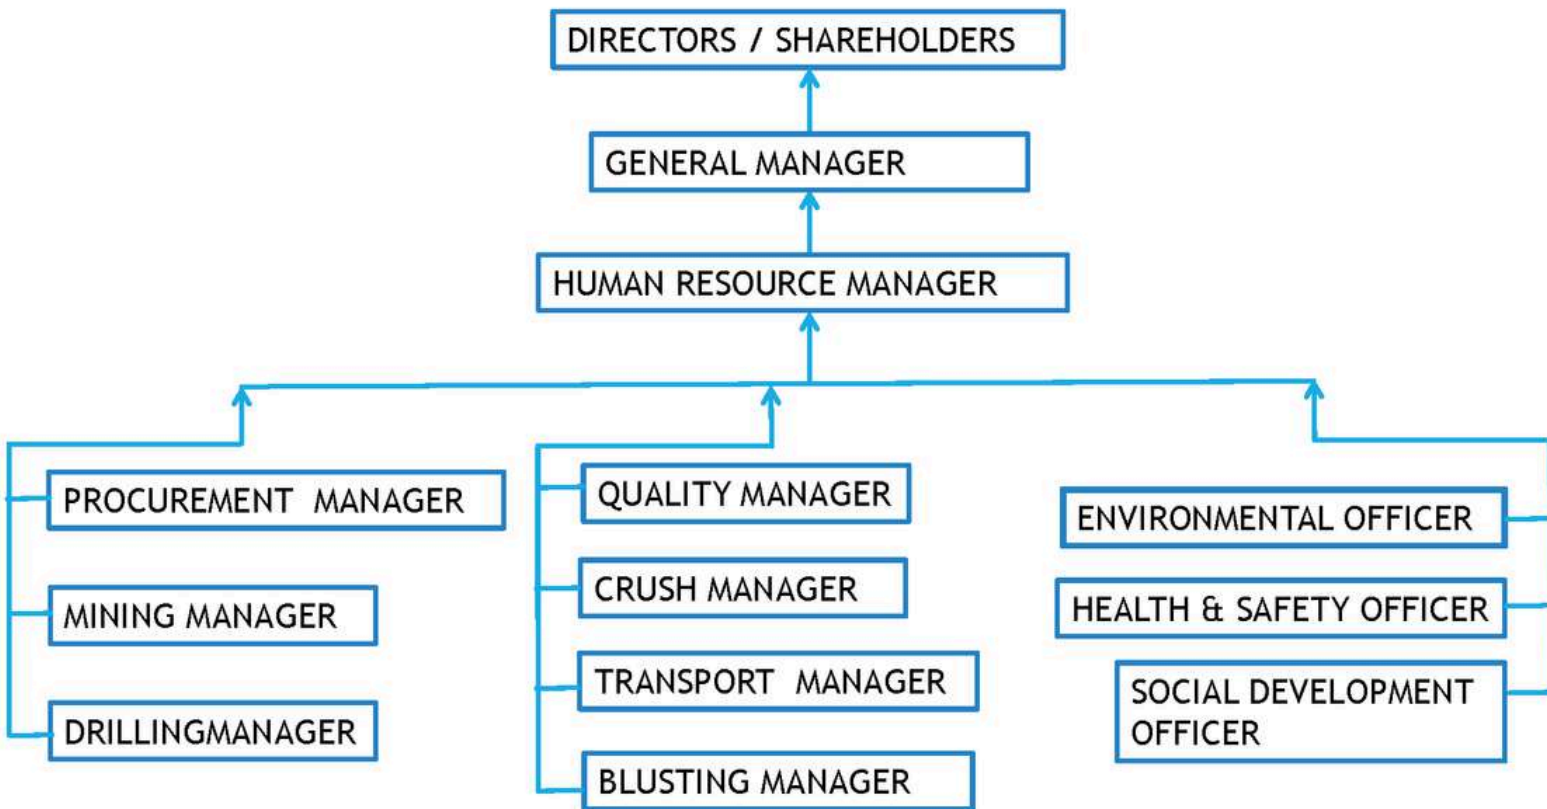

Serve customer through quality products.

Do the right thing.

Continuous improvement via research and development.

Care for employees and environment.

OUR PROJECTS

- **Road constructions and machinery**

Chhabhadiya holdings limited is a leading infrastructure development company dedicated to building sustainable and innovative solutions in the construction industry. With a track record of excellence and a commitment to quality, we specialize in road construction projects that transform landscapes and enhance connectivity. Our recent endeavor in Nairobi, Kenya, exemplifies our dedication to delivering projects that exceed expectations while contributing positively to local communities.

In collaboration with local authorities and stakeholders, Chhabhadiya holdings limited undertook a significant road construction project spanning between 5 to 50 kilometers in Nairobi, Kenya. This ambitious endeavor aimed to improve transportation infrastructure, alleviate traffic congestion, and foster economic growth in the region. Through meticulous planning, state-of-the-art technology, and skilled craftsmanship, we embarked on this journey to reshape the urban landscape and create pathways for progress.

Our comprehensive scope of work encompassed various aspects of road construction, including but not limited to.

- **Route Planning and Design**
 - **Earthworks and Grading**
 - **Pavement Construction**
 - **Drainage Systems**
 - **Landscaping and Beautification**
-

Mining, Drilling & crushing

Chhabhadiya Holding Limited is also a distinguished leader in the mining and construction industry, specializing in coal mining, pozzolana extraction, blasting, crushing, as well as transport and delivery services. With a rich heritage of expertise and a relentless commitment to excellence, we have established ourselves as pioneers in delivering high-quality materials and services to meet the evolving needs of our clients.

SOCIAL RESPONSIBILITY

Providing social responsible programme for the development of surrounding areas like;

- **Construction of feeder roads**
- **Construction of water points for example boreholes and piped water systems.**

Extend social services to the less advantaged people like

- **Food rations to the surrounding community and other services like cement.**
 - **Planting trees as means of contributing to environmental protection programmes**
-

SOCIAL RESPONSIBILITY

Activities participated

HEALTH & SAFETY

Chhabhadiya Holding Limited is committed to meeting our occupational health and safety goals and to maintain a safe and healthy work place. We consider the health and safety of each of our employees to be of primary importance.

“It is our policy to conduct our mining works in the safest possible manner and to minimize the impact of our works on the environment whilst complying with the occupational health and safety laws and regulations”.

It is therefore our responsibility to:

Comply with all relevant environmental, occupational health and safety laws and regulations.

Provide and maintain a suitable and safe working environment and safe methods of work.

Effective and responsible waste management and disposal.

HEALTH & SAFETY TRAINING

ENVIRONMENTAL

In the recent past, there has been rapid population growth and an ever-increasing large number of projects requiring significant amounts of construction materials such as aggregates, Pozzolana for Cement factories. To satisfy the growing demands of the construction industry. Chhabhadiya Holdings Limited set up a quarry mines.

Mining and other related activities including harvesting of aggregate, sand, gravel, soil and clay and exploration for the production of minerals in any form are listed as high-risk projects under the Second Schedule of the Environmental Management and Coordination Act 1999 (Cap. 387) of the Laws of Uganda respectively. All high-risk projects listed under the Second Schedule above should undergo an Environmental and Social Impact Assessment (ESIA) Study process. Hence, the qualified Environmental consultants have been assigned Licensed by NEMA to prepare an ESIA Study Report for the Project. In addition to compliance with the law. The report has incorporated both subsistence and large-scale sectors looking at farming and animal production within the neighbourhood.

ENVIRONMENTAL

The project is to feature an open cast mine and auxiliary facilities such as access roads, power, water, site offices, sanitary facilities, generator room and explosive stores among others. Three main processes will occur during mining i.e., blasting, loading and transportation of boulders to the crushers. Before blasting occurs, the quarrying site will be cleared of any vegetation. A vertical drill hole for loading explosives will then be made into the rock strata to determine the vertical extend of the ore's body. Both primary and secondary blasting will be undertaken for the purposes of breaking rock boulders into acceptable sizes for onward transportation to the crushers.

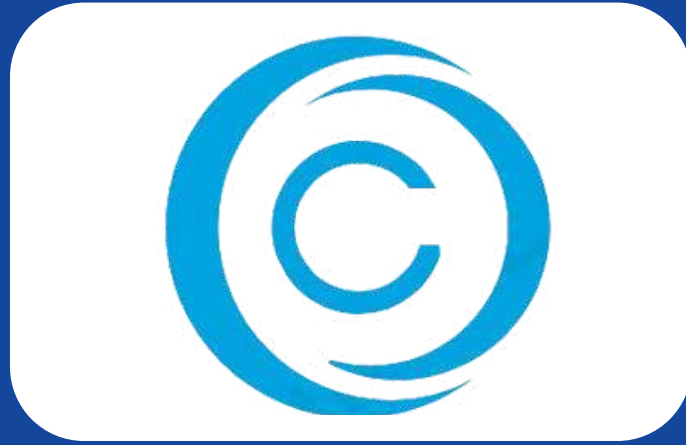

At the crushers, rocks will be passed through a system of conveyor belts and sieves where they will be broken into different categories of aggregate as per the use required. The project activities will include; - Clearing of vegetation -A vertical drill hole for loading explosives will then be made into the rock strata to determine the vertical extend of the ore's body - blasting will be undertaken for the purposes of breaking rock boulders into acceptable sizes -Crushing of boulders - Transportation to various areas.

Environmental screening criteria to be informed by the Second Schedule of the Environmental Management and Coordination (Impact Assessment and Audit) Regulations 2003. As per this schedule, the issues to be considered by the experts include ecological impacts, socioeconomic issues, landscape changes, land use character and water.

The proposed development has to generate dust and noise pollution during the establishment and operational phases. In addition, there will be marginal increase in water demand and effluent generation during the establishment and operational phases. For the purposes of obtaining the baseline environmental quality conditions for future monitoring of the environmental performance of the Project. The Environmental Consultants assigned are to sample and analyse environmental media which is to include air, noise and soil as per the Environmental Management and Coordination Act Regulations. The methodology for sampling and analysis of the environmental media is to be done using the following sample equipment.

Ambient air quality measurements A Fixed-Point monitoring strategy is to be used to obtain baseline ambient air quality for the proposed project site.

Ambient noise level measurements Ambient noise measurements to determine the noise level. An inspection of the monitoring points and implicated activities of the area is to be undertaken, perimeter walls identified and noise level meter calibrated.
